

Software engineer with 2+ years of end-to-end ownership across backend systems, distributed cloud, and IoT — lead full-stack contributor on a multi-tenant radiology SaaS platform (React 18, Node.js/Feathers.js, AWS Lambda, Gemini/Vertex AI), HIPAA SaaS architecture with AWS Cognito multi-pool auth, real-time AI classification with GraphQL subscriptions and Inngest, and DICOM edge pipelines on Raspberry Pi. Comfortable driving architecture decisions from design to production. Seeking an SDE-2 role at a product company to own high-impact backend systems.

SKILLS

Backend	Node.js · Python · FastAPI · Express.js · FeathersJS · Apollo GraphQL · REST API Design · RBAC
Cloud & AWS	S3 · SQS · Lambda · Secrets Manager · AWS Cognito (multi-pool) · Event-driven Architecture
Multi-Tenant / HIPAA	Multi-Tenant Architecture · PHI-Safe Data Handling · SQLAlchemy (async) · Alembic
Databases	PostgreSQL · MySQL · MongoDB · Firebase
Distributed	Message Queues · Inngest · MongoDB Change Streams · Microservices · Retry Logic · Idempotency
IoT & Edge	Raspberry Pi · pynetdicom · FOTA (OTA) · Bluetooth · Linux · DICOM Imaging
Practices	Structured Logging · API Documentation (Swagger) · Agile / Scrum · Git

WORK EXPERIENCE

Full Stack Developer <i>Rugas Technologies Pvt. Ltd.</i>	Mar 2024 – Present Bangalore, KA
- Owned and shipped production backend systems end-to-end across healthcare, e-commerce, and legal AI domains using Node.js, Python, FastAPI, Express.js, and FeathersJS. - Architected AWS infrastructure (S3, SQS, Lambda, Cognito, Secrets Manager) for async processing pipelines, secure credential management, and multi-tenant auth in live production environments. - Drove multi-tenant SaaS architecture decisions — 3-tier isolation models, AWS Cognito multi-pool auth, PHI-safe data handling, and control-plane/data-plane separation for a HIPAA-aligned platform targeting AWS Marketplace. - Owned Python-based IoT edge services on Raspberry Pi end-to-end — DICOM SCP servers, multi-stage concurrent processing pipelines, and FOTA firmware deployment for production medical devices. - Implemented structured logging and production observability; proactively resolved critical issues beyond assigned scope — recognised with Certificate of Appreciation for ownership and reliability.	

KEY PROJECTS

TachyonLeap — Multi-Tenant Elder Care SaaS (HIPAA) <i>Python · FastAPI · SQLAlchemy · PostgreSQL · AWS Cognito · Redis</i>	In Progress · 2026
Driving the tenancy and auth architecture — 3-tier multi-tenant isolation model (shared / DB-isolated / fully-isolated) with a control-plane vs data-plane split, AWS Cognito multi-pool auth (one User Pool per org), multi-issuer JWT verification with per-pool JWKS caching in Redis, and PHI-safe phone hashing (HMAC-SHA256) so the control-plane database holds zero patient-identifiable data.	
RADX.report — Multi-Tenant Radiology SaaS Platform <i>React 18 · TypeScript · Feathers.js · PostgreSQL · AWS Lambda · SQS · S3 · Redis · Gemini/Vertex AI · Lexical · Raspberry Pi</i>	Production · 2024–2026
Served as lead full-stack engineer and largest single contributor (1,300+ commits, ~130k lines, 3,400 file changes) on a multi-tenant radiology SaaS platform — React 18/TypeScript frontend, Node.js/Feathers.js backend, PostgreSQL, AWS Lambda. Owned the Lexical clinical report editor (variable nodes, templates, shorthands), async LLM pipeline (SQS → Lambda → Gemini/Vertex AI + AI chatbot), PDF export pipeline (S3 → SQS → Puppeteer Lambda), clinical calculators, licensing/billing enforcement, multi-tenant data isolation, and the DICOM SCP edge service on Raspberry Pi (C-STORE receive, SR parsing, S3 upload, FOTA with SHA256 — passed compliance audit, zero incidents).	
Casey Legal AI — Multi-Tenant B2B Legal AI Platform <i>Node.js · Apollo GraphQL · Inngest · MongoDB Change Streams · Next.js 15</i>	In Progress · 2026
Sole developer extending existing multi-service codebase — built real-time AI document classification: upload → Inngest workflow (pdf-parse/mammoth, bypassing Azure Document Intelligence to avoid rate limits per upload) → MongoDB change-stream watcher → GraphQL subscription → live UI. Retry with optimistic rollback; many-to-many evidence coverage map.	
KarmaTickets.ca — E-Commerce Ticketing Platform <i>Node.js · FeathersJS · PostgreSQL · MongoDB · Next.js</i>	Production · 2024
Owned multi-tier RBAC from scratch (admin / organiser / buyer) enforced at both route middleware and data-access layer — preventing privilege escalation via direct service calls that route-only RBAC misses. Shipped JWT auth, session management, and order processing pipelines on a live e-commerce platform serving customers in Canada.	

EDUCATION

B.Tech, Textile Technology <i>PSG College of Technology</i>	Jul 2015 – May 2019 Coimbatore, TN
Non-CS background. Self-directed transition into software engineering through production systems, DSA training, and AWS/IoT development.
